

Letter of Recommendation for Dylan Pratt

I have worked with Dylan for two years as his team lead and mentor. We hired Dylan on a two-year contract as a junior software engineer to aid our team in research, development, documentation and technical consulting. Our team supports dozens of engineering teams throughout our organization in the development of Java web applications using Java, Spring, Spring Boot, and Node.js. Dylan has assisted us in our development and testing of shared platform libraries, web applications, and other tools. He has been the primary maintainer for some of these projects. Dylan has also assisted our team with training and research. He personally researched the development of web services on AWS and presented an excellent training on this topic to our organization.

I have seen Dylan grow considerably in his time on my team. He also brought many strengths to my team that have improved the quality of the service that we provide. Dylan has proven himself capable of working with engineers throughout our organization, asking questions, gathering requirements, analyzing technical issues, and developing solutions. Dylan has especially demonstrated strengths in excellent team communication and in tracking and coordinating multiple tasks simultaneously. He has always been positive, eager, and willing to take on any task that I have assigned him.

I would highly recommend Dylan for any software engineering position that could leverage the strengths and experience that he has demonstrated for us.
